

COLORADO SCHOOL OF MINES

Colorado School of Mines, located in Golden, Colorado, is a public research university devoted to engineering, mining, petroleum, and other applied sciences. Mines boasts the highest admissions standards of any public university in Colorado and is highly ranked both nationally and internationally.

Mines has distinguished itself by developing a curriculum and research program geared towards responsible stewardship of the earth and its resources. In addition to strong education and research programs in traditional fields of science and engineering, Mines is one of a very few institutions in the world having broad expertise in resource exploration, extraction, production and utilization. As such, Mines occupies a unique position among the world's institutions of higher education.

Every academic year, Mines welcomes approximately 50 exchange students and 200 hundred full degree seeking students from all over the world. Exchange students have the opportunity to immerse themselves in American culture inside and outside the classroom. Exchange students are encouraged and welcomed to attend athletic events, join student clubs, participate in events put on by the Office of Global Education, and get involved in campus activities and traditions. They also have the opportunity to explore Colorado. There are beautiful trails for hiking and biking, and ski slopes are only an hour away. Students will also be paired with a local Mines student through the Global Connectors Program to provide peer-to-peer support and engagement.

Golden, Colorado, USA
