From July 31 to August 7, a large-scale Global Project-Based Learning (gPBL) program was held at Shibaura Campus for eight days. The event brought together 72 international students from six universities across five Asian countries, alongside 52 students from our university. Under this year's theme, "Sound Design," participants presented a wide range of creative proposals exploring how sound can connect people and inspire new ways of thinking.

To spark fresh ideas, students took on new challenges, including field research and user interviews in Tokyo, Kamakura, and surrounding areas. Despite the intense summer heat, all groups collaborated effectively, making the eight days a truly rewarding experience. The project outcomes are currently on display at the Open Lab on the 6th floor of the Main Building, Toyosu Campus. We encourage everyone to visit and view their work.
